SUMMARY

I build AI solutions that are secure, tested, and auditable: the LLM decides what should change, deterministic code applies it, and automated tests decide whether it ships. I come from large-scale IT operations, where I co-led a 16-technician team supporting more than 13,000 service points for CAIXA (Brazilian federal bank), and I co-founded an AI implementation consultancy. Grounded in ISO/IEC 27001, LGPD (Brazil's data protection law), and ISO/IEC 42001; journalism background for clear technical writing.

EXPERIENCE

Freelance and independent projects Mar 2026 – Present

- Technical documentation and executive presentations for municipal digital-maturity assessments.
- Built and published the projects below and my portfolio (Next.js/Vercel, with CI); earned Microsoft AB-731.

Teledata — IT service provider to CAIXA · IT Technical Supervisor Oct 2024 – Mar 2026

- Promoted from technician to supervisor of the same team in 11 months (supervisor since Oct 2025).
- Co-led, with another shift supervisor, 16 technicians responsible for infrastructure across 13,000+ service points; about 1,000 incidents per month, including critical outages escalated to telecom carriers.
- Built AI-assisted workflows for documentation, reporting, and shift coordination; trained new technicians on ITIL practices.

MerkurIA — AI implementation consultancy (startup) · Co-founder Jun 2023 – Jan 2026

- Project management and security and governance for client projects; built AI automations and assistants, including a customer-service bot.
- AI risk and feasibility assessments with attention to LGPD; trained the internal team.

PROJECTS

Autoria em Forma — thesis formatting and revision with an AI pipeline Oct 2026 · paused

- Launched and paused after a demand test; 2 jobs delivered. Python + Claude: the LLM flags, code applies, and 29 regression checks (4 blocking) decide delivery; 14 real errors turned into rules; 111-item QA checklist.
- Site on Cloudflare Workers/D1 with hash-based CSP, rate limiting, prompt-injection defense, XXE, zip-bomb, and macro protection, and data minimization (LGPD).

Support Agent Governance Prototype — governance for an AI support agent GitHub · public

- Python: rule-based triage, human escalation, and an audit log with sensitive-data masking; 20 tests in CI. In development (v2): an LLM classifies and drafts, rules act as guardrails, and a person approves.

Corporate AI Use Policy — bilingual template v2.1 GitHub · public

- Aligned with LGPD, ISO/IEC 42001, and ISO/IEC 27001: Shadow AI controls, a 23-requirement mapping, and an Excel AI vendor risk matrix.

SKILLS

Applied AI: Claude, prompt engineering, agents, Copilot Studio, Power Automate, n8n/Make, AI-assisted development.

Engineering: Python, regression testing, CI, Cloudflare Workers/D1, Next.js/Vercel, SQL, ServiceNow (learning).

Security and governance: ISO/IEC 27001, LGPD, ISO/IEC 42001, NIST AI RMF, EU AI Act and COBIT (conceptual), ITIL 4, web security, prompt injection.

CERTIFICATIONS

Microsoft AI Transformation Leader (AB-731), Jul 2026 • ITIL® 4 Foundation (PeopleCert, no. GR671723801GF), Dec 2024 • ISO/IEC 27001:2022, ISO/IEC 20000, and ISO 9001 Associate (SkillFront), 2024 • In progress: Microsoft SC-900 and Scrum Master

EDUCATION

Systems Analysis and Development (Associate degree) — FACINT Expected Jul 2027
Journalism (Bachelor's degree) — IESB Expected Jul 2027
Shark in ServiceNow Bootcamp, 14th ed. (15 h) — Shark Academy (Aoop) Oct 2026
